

Summary

ML engineer specializing in production systems and team leadership, with 10+ years shipping ML products in multiple industries

Limbic

Lead Machine Learning Engineer (Mar 2024-present)

- **Grew ML engineering team from 1 to 6 people**, hiring and managing 5 direct reports across 4 concurrent projects
- Deployed **Voice AI** system processing **1,000 calls/week**, led cross-functional team from conception to deployment in 3 months including clinical testing and validation
- Enhanced ML infrastructure accelerating release cycle from **~1 -> ~30 deployments/week**, reducing research to production time from weeks to days
- Architected and built **LLM-powered mini therapy sessions** combining **commercial LLMs with custom fine-tuned models** and **multi-agent workflow**. Co-authored and helped run research validating clinical efficacy. Paper under review at top 5 impact factor journal.

Consulting Machine Learning Engineer (June 2022)

- Deployed model for mental health triage product that helped **>400,000 patients access therapy in NHS**

Thought Saver

CTO (Oct 2022-Dec 2024)

- Diagnosed critical data infrastructure issues, **rebuilt analytics stack from scratch**
- Led product pivot and growth initiatives including **LLM-powered** features, SEO optimization and mobile app release
- Managed **3 person cross-functional team** through challenging product-market fit search

Reti.Health

Co-Founder/CTO (Dec 2020-April 2022)

- Trained multi-objective CNNs to predict heart attack, stroke and hypertension. **Beat Google Health's results on the same dataset**
- **Secured >£100k seed funding** from Entrepreneur First and angels, developed partnership with optometry group with 200 branches
- Sourced multiple datasets, including 180k retinal photos linked to NHS health records
- Integrated models into **web and desktop apps**, deployed and tested them with optometrists

Opteo

Consulting Machine Learning Engineer (Jul 2023)

- Deployed NLP **similar customer finder**
Machine Learning Engineer (Dec 2018-Sep 2020)
- **Built NLP powered keyword suggestion tool** powering one of the company's most popular features
- Setup data warehouse (Big Query) and BI (Metabase)

Visii

Head of Research (Apr 2016-Mar 2020)
Computational Neuroscientist (Jan 2015-Apr 2016)

- **Built ML backend** powering visual search tools serving millions of requests/month. Decreased API response times 10x, and allowed far faster development
- Built an **interactive human-in-the-loop image classifier, optimised image feature extraction, built and tailored multi-headed networks** to client needs

Technical Skills

Python, PyTorch, FastAPI | JavaScript/TypeScript, React | AWS, GCP | PostgreSQL | LLMs, CNNs

Miscellaneous

- On [my website](#) you can see Mobile [games](#) I've built (**Java**), playable in browser
- Starship Robotics Self Driving Challenge winner (2018)
- Interested in Effective altruism - ambitious social impact projects and companies

Education

UCL - RA/PhD Candidate in **Cognitive Neuroscience**

Groningen - MSc in **Cognitive Neuroscience** - *Cum Laude*

Leeds - **Cognitive Science** - *1st Class Honours*

Sample Publications

Ipsilateral finger representations in the sensorimotor cortex are driven by active movement processes, not passive sensory input (Berlot et al, 2019, *Journal of Neurophysiology*)

Effects of different electrical brain stimulation protocols on subcomponents of motor skill learning. (Prichard et al, 2014, *Brain Stimulation*)
